The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply									
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If the period for reply secified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).  Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Kirsten (US6011901).

Regarding claims 1,7 and 8, Kirsten shows an image intermittent recording device shown as a compressed vide record/playback device in fig.2 comprising:

Specifying means for specifying at specific time intervals digital images to be input into frames shown as a video selector (70) in fig.2 (col.3 l.66 –col.4 l.36, col.4 ll.60-63)

Coding means for coding digital images specified by the specifying means including intraframe and interframe compression coding, is shown by the image compressor (74) in fig.4 (col.12 II.52-65)

Recording means for recording each picture onto a recording medium is shown in fig.2 as a removable media storage (76) (col.4 II.56-58)

Control means for controlling the number of pictures created by said coding means is shown as an acquisition controller (104) in fig.4 where the state of the selector, which is responsible for the selection of frames to be coded, is controlled by the acquisition controller (col.9 II.17-28)

Application/Control Number: 09/748,237 Page 3

Art Unit: 2616

Regarding claims 2 and 9, Kirsten shows that the control means performs control such that as the time interval becomes longer as the number of pictures coded by coding means becomes smaller (col.4 II. 48-55) whereby if there is a longer amount of time between a trigger event, a smaller number of pictures will be recorded.

Regarding claims 3 and 10, Kirsten shows that control means controls the number of coded pictures based on recording time externally input and the recording capacity of the medium (col.16 II.5-60) where it is discussed how the recording capacity is set, and data is either rewritten over the old data or the storage medium must be replaced.

Regarding claims 4 and 11, Kirsten discusses how the specifying means determines the time interval based on a recording time that is externally input (col.16 II.5-15)

Regarding claims 5 and 12, Kirsten shows specifying means that specify digital images at specific times by counting vertical synchronization signals whereby the video selector which selects digital images at specified times detects codes input to the vertical synchronizing interval so as to specify particular digital images (col9 II.6-16)

Regarding claim 6, Kirsten shows that the recordable medium is a DVD shown

as a rewritable optical disk (col.9 II.49)

Conclusion

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Alicia M Duggins whose telephone number is (703)305-

5621. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Andrew Faile can be reached on (703) 305-4380. The fax phone number

for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
